CREW BOATS

Featuring a specifically developed hull design to improve both efficiency and comfort over conventional craft in the Crewboat and offshore markets. The design has evolved from Camarc's well proven double chine hull form with efficient dry running at speed and excellent all-round seakeeping. The new design was optimised and tank tested in the UK to present a refined shape forward to improve efficiencies and reduce vertical accelerations leading on to improved fuel economy and comfort. The notable vertical stem, which is above water only, allows both the waterline length to be maximised for efficiency and a fine deep-V entry to be incorporated for reduced accelerations whilst maintaining Camarc's proven hull features.

The new Camarc Crewboat range includes designs from 24m to 45m with speeds to 30+ Knots, dependent on customer specifications and options.

40m Crew Boat

1st of 2 45m built at Triangle Shipbuilding, Dubai
